"Did you ever buy a mouse-trap?" pensively inquired a man on a Sixth avenue elevated train the other morning of the friend who sat next to him. "I never did," said the other, looking up from his newspaper in some surprise, "did you?"

"I have, indeed. I am a mouse-trap expert. You see the mice in our flat have been pretty bad. They grew so tame that I've seen them run across the parlor when three or four people were in the room, and at night the nibbling and pattering became so loud and constant that we could scarcely sleep. We kept a pile of slippers and shoes by the side of the bed, and while the ammunition held out there was a constant fusilade. About two weeks ago I grew so sick of 'mouse, mouse,' as the unending domestic topic, that I said to my wife: 'See here, this mouse business must stop. I'll buy a trap.' I did. I came home that evening with one of those round red snap traps, and on the way up from the elevated station I invested in a big slice of fine fresh cheese. Well, we set that trap for four nights, and caught not one mouse. I thought perhaps it worked hard so I oiled up the wires. No success. I then bought a square trap with two holes and another with four, thus giving us a total of eleven mice capacity, but all in vain. The next day I went over in Vesey street and looked into the mouse-trap busi-

"Can you give me any points on mouse traps,' I said to the proprietor of a store over there. 'I know a thing or two about snap traps, but I am looking for a trap that will appeal to an educated, intelligent mouse.'

"The dealer looked a little surprised. " 'Have you children?' he said. I admitted a little girl.

" 'Then here,' he said, 'is the squirrel cage trap. It always pleases the children. The mouse goes in here, the trap closes automatically, and he is caught. He then runs out into this wheel, and by running turns it. It is a very amusing device.' I said we were not looking for amusement, but we would like to catch a mouse or two, so I added that trap to the collection, and also another with wire wings, which were open when the trap was set, but clapped together by monkeying with the bait. I now had five traps, and that evening, just before retiring. I smoked up a big piece of cheese, baited every trap, and stood them around the corners of the room in an artless way, which I felt sure would appeal to the class of mice we were catering to. About three o'clock in the morning I awoke feeling very faint. We always keep a cracker or two in our bedroom, and I determined to get that wing trap. A moment later my wife was sitting up in a cold perspira-

" 'William," she whispered, 'is the house afire?' " 'Worse than that.' " 'Heavens and earth,' she said, get-

ting ready to scream. " 'Keep quiet," I snapped; "my big

toe is caught in the new wing trap.' "When she calmed down she kindly told me that my language had revealed depths of depravity in my nature that made her shudder. I finally separated that mouse trap from my person and crept back to bed, smelling like a Welsh rarebit. The next night I made one more attempt with those traps. I concluded the cheese was too mild. So I came home that evening with a slab of German cheese. I never had so much room in an elevated train before. The crowd fell over each other to give me a seat. I could have led that cheese by a string. We went to bed that night with cologne on our pillows and every window open, but all the traps were baited, and I said to my wife, 'it's now

The narrator paused here, and pensively read the advertisements on the opposite side of the ear.

"Well, did you catch a mouse?" demanded his friend, with much interest. "Yes, we caught a mouse."

"Which trap?" "No trap at all. He fell into the bath tub."-N. Y. Tribune.

#### RENOVATING FEATHERS.

The Way to Prepare Material for a Soft and Fluffy Pillow.

Almost everyone has pillows or cushions in which are feathers that seriously need attention. One of the best ways to do this, if one is far from a renovating establishment, is to empty the feathers into a wash-boiler of strong suds with half a cup of washing-soda dissolved in it. Let the feathers boil for two or three hours, frequently stirring and beating them with the clothesstick. The object of this is to free them from any animal matter that may remain and which is the cause of the disagreeable odor so often observed in these articles. When done, throw in sufficient cold water to admit taking out the feathers with the hands; pick them out a few at a time, carefully removing any quills that remain. Many women have time and inclination to do little odd jobs that are an advantage, and to these it may be said that the or dinary feathers, by carefully taking out the larger quills, may be made almost as soft as down. With the thumb and fingers, strip the flues from the quills or cut them with the shears or a sharp knife. The former is much the quicker way, but the latter gives the softer material. Leave only the merest tip of the quill, and the soft fluffy pillows that will be the result are enough to console any woman for the time consumed.

Common chicken-feathers make the most exquisite cushions and pillows if treated in this way; but it is well to wash them thoroughly before using. and to rinse carefully. When ready for drying, put a sheet or large cloth into a tub, pour the feathers, rinsingwater and all into it, then slowly raise the cloth, allowing the water to drain through. When it is all removed, lay When nearly dry, beat them with a cane and shake and rub them thoroughly through the hands. In this way all of the flues are loosened and the material becomes as soft and downy as one could imagine. This is some trouble, but it pays, and no disagreeable odor will ever again come into feathers treated in this way, unless they are very carelessly used. A few be sequired in no other way.-N. Y. body out of the silk.-Good Housekeep Voice. Ledger.

#### DOMESTIC CONCERNS.

-Pigs' Feet: Clean, and boil until hey are dropping to pieces. Remove from the liquor and put them into a little hot water; add salt, let boil, take them out on a flat dish and serve cold. Take one quart of the liquor or stock, which must not be salted, add a pint of sugar, flavor to taste, boil and pour into jelly molds. Serve with cream. -

Housekeeper. -Worth circulating is the remedy pronounced one of the most effective remedies known for sick headache. Place a pinch of salt on the tongue and allow it to dissolve slowly. In about ten minutes it may be followed by a drink of water. The actual moment when the cure begins is not so accurately stated but presumably very soon after the drink .- N. Y. Times.

-Pancakes: Two cups prepared flour, six eggs, one saltspoonful of salt, milk to make a thin batter. Beat the eggs light, add salt, two cups of milk, then the whites and flour alternately with milk, until the batter is of the right consistency. Run a teaspoonful of lard over the bottom of a hot fryingpan, pour in a large ladieful of batter and fry quickly. Roll the pancake up like a sheet of fpaper, lay upon a hot dish, put in more lard, and fry another pancake. Keep hot over boiling water, sending half a dozen to the table at a

-Parsnip and Pork Stew: Cut up a pound of fresh, uncooked pork, or half the amount of salt pork. Put it on to boil in two quarts of cold water. After it has cooked an hour skim off the fat. Scrape three or four good sized parsnips, cut in inch slices and add to the staw, also an onion sliced, and half an hour before dinner peel and cut up half a dozen potatoes, parboil a few minutes and add to the stew. When done take up meat and vegetables, thicken the gravy and season to taste, then pour over meat, etc.—Orange Judd

-Lobster Salad: After boiling a hen lobster, let cool, crack the shell, take out the meat, and tear it apart in flakes; put on ice until wanted. Wash two heads of crisp lettuce, and shake dry. Put four tablespoonfuls of water in a saucepan with two of vinegar, one of sugar; let heat; add a beaten egg, a pinch of salt, and cayenne. Take from the fire. When cool mix in a tablespoonful of olive oil and the powdered yolks of four hard-boiled eggs. Pull the lettuce leaves apart, and mix with the lobster. DPut in a salad-bowl, pour the dressing over, and garnish with lettuce leaves and tiny scarlet radishes .-Harper's Bazar.

-Apples Cooked in Butter: Pare and core six tart apples of equal size, and arrange them in a baking dish that is large enough to receive all the apples upon its flat surface. Place a teaspoonal of sugar in the hollow of each ple, and also a small quantity of any preferred spice if the apples are not finely flavored. After they have begun to bake, baste them with a scanty half-cupful of water in which a level tablespoonful of butter has been melted; and repeat the basting twice. The last basting will use up the buttered water, and the apples should be done shortly afterward. This preparation has a very dainty flavor, and it will present an attractive appearance if the fruit is not broken. It is usually served hot for breakfast or for a winter supper. Sugar may be dusted over the apples when taken from the oven; or if they are to be eaten cold, it may be added just before sending to the table. - De-

is a fine sauce to serve with fried eggs.

Salt Baths In the spring, when the system is apt to be run down by the confinement in the heated atmosphere of winter houses, and by a lack of the good, green vegetables which do much to tone up the system, it is well to call attention to the value of salt bathing. Almost all intelligent nurses now recommend the salt bath, especially for nervous persons or individuals whose systems have become enerated by lack of abundant outdoor exercise. Where a person is in individually good health and is accustomed to a cold bath, a cup of rocksalt may always be used to advantage, dissolved in the bathing water. But this saline bath must be rinsed off afterward with clear water, and the body then rubbed vigorously with heavy crash towels. But in the case of a little child or delicate person, authorities recommend the warm salt-water bath, taken at night just before retiring. The soothing effect of such a bath as this can hardly be appreciated by a person who has never tried it. A nervous little child will often fall into a refreshing slumber after such a bath as this, when every other expedient fails.-N. Y.

#### Moire Silks.

Tribune.

The moire or watered silk is usually gros-grain or faille in which a watered pattern has been produced by passing the silk over hot calenders. the feathers in some dry place, out of There are several different varieties of nd, or they will blow away. | moire silks. Moire antique is a silk in which the watered wave extends from selvage to selvage. In moire Française, the watered effect appears in stripes, varying in size according to the pattern of the silk. Moire rayonante, introduced this season, has a very fine wave. which forms hair lines or rays in the breadth. In recent years, silk has been very often associated with satin or faille Francaise in stripes. A moire drops of oil of pine thrown into the silk is never an especially durable rinsing-water will give the feathers a goods. #### AGRICULTURAL HINTS.

ROADS WITHOUT COST. An Able Argument for the Employment

of State Convicts. The great objection which is blocking the efforts of the friends of good roads is their cost. If some benevolent individual would put his hand in his pocket and donate a system of good roads to the country, all would be lovely. But till then the average legislator finds it easier to do nothing. What we need is an object lesson that will convince doubters that every cent of money put into permanent road improvement will pay good interest. Mind you, only permanent improvement will do this; a little clay and gravel piled on the road-bed will be money wasted.

The expense of the greater part of these roads must ultimately be met by those receiving the benefit of them. The villages, townships and counties will each have their systems and their taxes. But for the present a few firstclass public highways should be built

[Condition of an important country road

by the state, as an object lesson to teach the county commissioners, the township and local road officers, and all private citizens the value and necessity of good roads. Meanwhile in every state in the union the cry of "prison competition" comes from the laborers. In Illinois the governor has sanctioned an outlay of several hundred thousand dollars to purchase tools for the convicts. The state, instead of leasing the convict labor to contractors, will now go into direct competition as a manufacturer. How this will help the labor problem we cannot

The only possible way to solve it is to establish a new industry where the convicts shall not compete with honest laborers. Why does not the system of state roads furnish just the kind of employment necessary? The expense to the state would be far less than that required to establish workshops, and communities would be given an example of good roads that would soon result in a system which would lift our farmers from the bane of "backwoods" existence and put them in the forefront of progress. The citizens of the state could thus all study the value of good roads, while the outlay would be no greater than at present and a positive advantage would be gained in the vexed field of contract labor .-Farm, Field and Fireside.

NUTRITIOUS ENSILAGE. A Fodder Rich in Nitrogenous Matter

Oats and peas sown together make a fodder rich in nitrogenous matter or protein that is just the thing to supplement the deficiency of corn ensilage in this element. J. H. Dyer, a large milk producer in Middlesex county, Mass., had two acres of peas and oats last year that was put in the silo the day it was cut. Samples of this silage and of the corn silage were analyzed at the Massachusetts experiment station and showed that 100 of each contained the following number of pounds of the feeding elements:

Lbs. of the different silage. 38.0 2.4 20.0 25.4 8.5 Water, Sugar, starch, etc., Protein,

Ash, Feeding value Pewt, 57 53140 The corn silage has twice as much water as the pea-and-oat silage. With only 20 pounds of dry matter to the hundred weight, the amount of the different nutrients is, of course, much less in the corn than in the pea-and-oat silage, the latter being 62 per cent. dry matter. This dry matter contains nearly 14 per cent. of protein against only 8 per cent. in the dry matter of corn silage, so that with three times as much dry matter in the pea-and-oat silage the table shows that 100 pounds of it contains nearly four times as much protein as does the corn silage. Hence the former makes up what the corn lacks, and the two different kinds of silage together make a pretty complete feed. Mr. Dyer still further balanced up or ceriched the pasture by feeding damaged wheat, which contained a still larger propotion of protein. The milk part showed the benefit of this ration. Farmers should try peas and oats, either as dry fodder or as ensilage .- Farm and Home.

Abundant Rains Needed for Trees. Trees in order to grow require evenly distributed and abundant rainfall, and the reason that the elevated plateau east of the Rocky mountains is destitute of trees is that it does not enjoy a sufficient precipitation of moisture to enable them to live. Rain causes trees to grew, but trees do not produce rain. The timber-culture act, which sought to cover these plains with trees, was abortive because, conceived in ignorance of the conditions of the country, it sought to produce results which were physically impossible. Trees will grow anywhere between the one hundredth meridian and the Rocky mountains where sufficient water can be obtained for irrigation; but unless the ground is artificially watered most of this great region must remain treeless except in the immediate neighborhood of streams. -Garden and Forest.

Success in Horticulture. To be a successful horticulturist one must be a quick and careful observer. To see properly and to see all there is in one's surroundings, is the beginning of a good and broad education. It is moving capital. The study of botany, of entomology, of ornithology, diligent-ly pursued, is the most important means to acquiring good habits of ob-servation. Few farmers know what is going on about them, or, if they do, they often interpret it woods. they often interpret it wrongly. A good observer sees what his neighbor is doing, where he succeeds and where he fails. Success and failures in one's own neighborhood are more valuable than those we read about. -Farmers

### Wanted: Men. Not systems fit and wise,
